

FOR IMMEDIATE PRESS RELEASE: CONSUMERS

LET THERE BE LIGHT!

The IntelaVoice™ by VOS Systems Inc.

Lets You Talk To Your Lights & Small Appliances To Turn Them On

POWAY, CA - If you have ever dropped an armful of groceries trying to turn on the light as you walked in the door at home or if you occasionally bump into furniture reaching for a table lamp, then you're probably a candidate for the **IntelaVoice™**, the world's first voice-activated light switch.

Utilizing its patented state-of-the-art speech recognition technology, the **IntelaVoice™** lets you turn a light on and off with a simple one-word command: "**lights.**" Manufactured by **VOS Systems Inc.**, the IntelaVoice™ also is pre-programmed for three other vocal commands, which will allow you to turn on and off, radios, televisions, fans and other small appliances from as far away as 20 feet.

The IntelaVoice™ - which responds to anyone's command - is a stand-alone unit that looks like a computer mouse and is comparable in size. You plug it into a standard outlet and then plug any lamp or small appliance, with up to 150 watts of power, into the **IntelaVoice™**. It takes just a matter of seconds. The American Voice Input/Output Society or AVIOS was so impressed, it honored the **IntelaVoice™** with the **Best Consumer Product of 1997** award!
